

Building Enterprise-Ready Agentic AI on AWS

Customer Industry: Financial Services

Technology Stack: Amazon Bedrock, Strands Agents SDK, Amazon Bedrock AgentCore

Challenge

The customer required an intelligent personal finance assistant capable of understanding natural language, providing personalized financial guidance, and scaling into a production-ready enterprise platform.

Phase 1 – Single-Agent Architecture

Budget Assistant → Custom Financial Tools → Conversation Memory → Structured Outputs → Visual Analytics

Key Capabilities

- Personalized financial guidance
- 50/30/20 budget automation
- Spending analysis and visualization
- Context-aware conversations
- Responsible AI guardrails

Phase 2 – Multi-Agent Architecture

Orchestrator Agent

■■ Budget Agent

■■ Financial Analysis Agent

Coordinated agent collaboration for complex financial decision-making.

Production Deployment

Amazon Bedrock AgentCore Runtime enabled enterprise-grade deployment, observability, scalability, and governance.

Business Outcomes

- Accelerated AI adoption
- Faster solution development
- Enterprise-ready deployment model
- Improved customer engagement

- Scalable multi-agent foundation
